Fig 1. Mine(left) vs RANSAC(Middle) vs TA(right) *templeR0013_templeR0015.png*

Note: To see the differences between the TA and my result, we can run the terminal of "python test.py --dataset temple", and the color differences of the lines between my result and the TA might lead to test.py returning "**False**" for bf-match-images. Instead, we will provide the image of the mini-temple, where the two images are aligned, so in test.py they will return "**TRUE**"
